Management's Assertion

Management's Assertion

We have prepared the accompanying description of Manson Western, LLC's (WPS - Western Psychological Services) system throughout the period January 15, 2022 to April 15, 2022, based on the criteria for a description of a service organization's system set forth in DC 200, 2018 Description Criteria for a Description of a Service Organization's System in a SOC 3® Report. The description is intended to provide report users with information about WPS's system that may be useful when assessing the risks arising from interactions with WPS's system, particularly information about system controls that WPS has designed, implemented and operated to provide reasonable assurance that its service commitments and system requirements were achieved based on the trust services criteria relevant to Security, Confidentiality, and Availability set forth in *TSP 100, 2017 Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy*.

WPS uses a subservice organization for cloud hosting services. The description indicates that complementary subservice organization controls that are suitably designed and operating effectively are necessary, along with controls at WPS, to achieve WPS's service commitments and system requirements based on the applicable trust services criteria. The description presents WPS's controls, the applicable trust services criteria, and the types of complementary subservice organization controls assumed in the design of WPS's controls. The description does not disclose the actual controls at the subservice organization.

The description indicates that complementary user entity controls that are suitably designed and operating effectively are necessary, along with controls at WPS, to achieve WPS's service commitments and system requirements based on the applicable trust services criteria. The description presents WPS's controls, the applicable trust services criteria, and the complementary user entity controls assumed in the design of WPS's controls.

We confirm, to the best of our knowledge and belief, that:

- a. The description presents WPS's system that was designed and implemented throughout the period January 15, 2022 to April 15, 2022 in accordance with the description criteria.
- b. The controls stated in the description were suitably designed throughout the period January 15, 2022 to April 15, 2022, to provide reasonable assurance that WPS's service commitments and system requirements would be achieved based on the applicable trust services criteria, if its controls operated effectively throughout the period, and if the subservice organization and user entities applied the complementary controls assumed in the design of WPS's controls during that period.
- c. The controls stated in the description operated effectively throughout the period January 15, 2022, to April 15, 2022, to provide reasonable assurance that WPS's service commitments and system requirements were achieved based on the applicable trust services criteria, if the complementary subservice organization and complementary user entity controls assumed in the design of WPS's controls operated effectively throughout the period.

Section 2

Independent Service Auditor's Report

Independent Service Auditor's Report

To: Manson Western, LLC

Background

Prescient Assurance, LLC is a licensed CPA Firm which provides audits and examinations for SOC2 attestations, Cloud Security Alliance STAR attestations, HIPAA, GDPR, CCPA, and FISMA compliance. Prescient Assurance is a leader in security certifications for B2B SAAS companies worldwide. We are a global Top 10 cloud security auditor certified by the Cloud Security Alliance STAR program.

Scope

Prescient Assurance, LLC has examined Manson Western, LLC's ("WPS") accompanying description of its Online Evaluation System found in Section 3, titled WPS System Description throughout the period January 15, 2022, to April 15, 2022, based on the criteria for a description of a service organization's system set forth in DC 200, 2018 Description Criteria for a Description of a Service Organization's System in a SOC 2® Report, and the suitability of the design and operating effectiveness of controls stated in the description throughout the period January 15, 2022, to April 15, 2022, to provide reasonable assurance that WPS's service commitments and system requirements were achieved based on the trust services criteria relevant to Security, Confidentiality, and Availability set forth in *TSP 100, 2017 Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy*.

WPS uses a subservice organization for cloud hosting services. The description indicates that complementary subservice organization controls that are suitably designed and operating effectively are necessary, along with controls at WPS, to achieve its service commitments and system requirements based on the applicable trust services criteria. The description presents WPS's controls, the applicable trust services criteria, and the types of complementary subservice organization controls assumed in the design of WPS's controls. The description does not disclose the actual controls at the subservice organization. Our examination did not include the services provided by the subservice organization, and we have not evaluated the suitability of the design or operating effectiveness of such complementary subservice organization controls.

The description indicates that certain complementary user entity controls that are suitably designed and operating effectively are necessary, along with controls at WPS, to achieve WPS's service commitments and system requirements based on the applicable trust services criteria. The description presents WPS's controls, the applicable trust services criteria, and the complementary user entity controls assumed in the design of WPS's controls. Our examination did not include such complementary user entity controls and we have not evaluated the suitability of the design or operating effectiveness of such complementary user entity controls.

Service Organization's Responsibilities

WPS is responsible for its service commitments and system requirements and for designing, implementing, and operating effective controls within the system to provide reasonable assurance that WPS's service commitments and system requirements were achieved. In Section 1, WPS has provided the accompanying assertion titled "Management's Assertion of WPS" (assertion) about the description and the suitability of the design and operating effectiveness of controls stated therein. WPS is also responsible for preparing the description and assertion, including the completeness, accuracy, and method of presentation of the description and assertion; providing the services covered by the description; selecting the applicable trust services criteria and stating the related controls in the description; and identifying the risks that threaten the achievement of the service organization's service commitments and system requirements.

Service Auditors' Responsibilities

Our responsibility is to express an opinion on the description and on the suitability of design and operating effectiveness of controls stated in the description based on our examination. Our examination was conducted in accordance with attestation standards established by the AICPA. Those standards require that we plan and perform our examination to obtain reasonable assurance about whether, in all material respects, the description is presented in accordance with the description criteria and the controls stated therein were suitably designed and operating effectively to provide reasonable assurance that the service organization's service commitments and system requirements were achieved based on the applicable trust services criteria. We believe that the evidence we obtained is sufficient and appropriate to provide a reasonable basis for our opinion.

An examination of the description of a service organization's system and the suitability of the design and operating effectiveness of controls involves:

1. Obtaining an understanding of the system and the service organization's service commitments and system requirements.
2. Assessing the risks that the description is not presented in accordance with the description criteria and that controls were not suitably designed or did not operate effectively.
3. Performing procedures to obtain evidence about whether the description is presented in accordance with the description criteria.
4. Performing procedures to obtain evidence about whether controls stated in the description were suitably designed to provide reasonable assurance that the service organization achieved its service commitments and system requirements based on the applicable trust services criteria.
5. Testing the operating effectiveness of controls stated in the description to provide reasonable assurance that the service organization achieved its service commitments and system requirements based on the applicable trust services criteria.
6. Evaluating the overall presentation of the description.

Our examination also included performing such other procedures as we considered necessary in the circumstances.

Inherent Limitations

The description is prepared to meet the common needs of a broad range of report users and may not, therefore, include every aspect of the system that individual report users may consider important to meet their informational needs. There are inherent limitations in any system of internal control, including the possibility of human error and the circumvention of controls. Because of their nature, controls may not always operate effectively to provide reasonable assurance that the service organization's service commitments and system requirements are achieved based on the applicable trust services criteria. Also, the projection to the future of any conclusions about the suitability of the design or operating effectiveness of controls is subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

Opinion

In Prescient Assurance, LLC's opinion, in all material respects:

- a. The description presents WPS's system that was designed and implemented throughout the period January 15, 2022, to April 15, 2022, in accordance with the description criteria.
- b. The controls stated in the description were suitably designed throughout the period January 15, 2022, to April 15, 2022, to provide reasonable assurance that WPS's service commitments and system requirements would be achieved based on the applicable trust services criteria, if its controls operated effectively throughout the period and if the subservice organization and user entities applied the complementary controls assumed in the design of WPS's controls throughout the period.
- c. The controls stated in the description operated effectively throughout the period January 15, 2022, to April 15, 2022, to provide reasonable assurance that WPS's service commitments and system requirements were achieved based on the applicable trust services criteria, if complementary subservice organization controls assumed in the design of WPS's controls operated effectively throughout the period.

Restricted Use

This report is intended solely for the information and use of WPS, user entities of WPS's system during some or all of the period January 15, 2022 to April 15, 2022, business partners of WPS subject to risks arising from interactions with the system, practitioners providing services to such user entities and business partners, prospective user entities and business partners, and regulators who have sufficient knowledge and understanding of the following:

1. The nature of the service provided by the service organization.
2. How the service organization's system interacts with user entities, business partners, subservice organizations, and other parties.
3. Internal control and its limitations.
4. Complementary subservice organization controls and how those controls interact with the controls at the service organization to achieve the service organization's service commitments and system requirements.

5. User entity responsibilities and how they may affect the user entity's ability to effectively use the service organization's services.
6. The applicable trust services criteria.
7. The risks that may threaten the achievement of the service organization's service commitments and system requirements and how controls address those risks.

This report is not intended to be, and should not be, used by anyone other than these specified parties.

Section 3

System Description

DC1: Company Overview and Services Provided

WPS is a leading independent publisher of educational and psychological assessments and related intervention resources. With more than 70 years of experience, we've built a global reputation as assessment experts in the areas of autism, speech and language, school and clinical psychology, and occupational therapy. We develop tests that improve clinical evaluation, inform diagnosis, and guide therapy. In doing so, we foster personal connections between authors and the clinicians, educators, and researchers who use their tests. When we develop a new test, we bring an author's idea to life, answer a researcher's question, meet a clinician's need, and, ideally, change an individual's life for the better.

WPS is a profitable, dynamic, and growing company engaged in work that makes a difference in people's lives. We offer the stability of a third-generation family business combined with the entrepreneurial spirit of a startup. We recognize that the world is changing fast, and that equally applies to our field and industry. For years, we've been investing in digital transformation and new ways of working. This has only accelerated in a post-covid world. Our mission is "unlocking potential." Inspired by our customers, who dedicate themselves to helping others in need, we hope to better understand the impact of our products and services on their lives. We are equally dedicated to applying the same to ourselves; as we continue to invest in a company culture that encourages growth, innovation, creativity, transparency, and collaboration.

DC2: The Principal Service Commitments and System Requirements

WPS will use commercially reasonable efforts to make our service available with an uptime percentage of at least 99.99%. WPS knows that providing the best possible support to our customers is critical to making our customers successful. Email, phone, and chat support is available from 6am - 4pm PST (M-F)

WPS will provide ongoing support to customers using the approved service support channel and knowledge base resources. When a request or transaction is submitted, WPS will authenticate the customer to verify their identity in proportion to the risk of the request or transaction.

The WPS Online Evaluation System is an Internet-based platform for administering and scoring assessments. It improves clinical efficiency by allowing you to administer and score WPS assessments electronically. This industry-leading digital solution streamlines assessment delivery, allowing you more time for helping your clients. The WPS Online Evaluation System provides access to a variety of assessments mostly for children and adolescents.

Internet access is required along with one of the following compatible web browsers:

- Mozilla Firefox version 54 and later (recommended)
Google Chrome version 58 and later
Microsoft Internet Explorer version 10 and later
Apple Safari version 10.0 and later

DC3: The components of the system used to provide the services

People

People	
Role	Responsibilities
Management	Responsible for enabling other employees to perform their jobs effectively and for maintaining security and compliance across the environment.
Product Management	Helps WPS define product requirements that meet customer needs by collecting customer insights and market research data to identify product viability, new product opportunities, and business scalability to meet larger company objectives across both paper and digital products, including our digital platform.
IT Infrastructure & Support	Responsible for ongoing procurement, support, maintenance and management of the servers, networking, data storage, computers, applications and other systems used to support WPS services. Also, responsible for providing timely resolution of employees' technical issues and problems.
IT Applications	Designs and implements new functionality, assesses and remediates any issues or bugs found in the WPS Platform, and architects and deploys the underlying cloud infrastructure on which the platform runs. Develops and enforces coding standards and best practices including performance, security, monitoring policies and procedures.
Customer Service	Responsible for providing internal and external customer support via phone, email, and live engagement. Additional responsibilities consist of order management, quote processing, general inquiries, and product returns.
Accounting & Finance	The Accounting and Finance department is responsible for the recording and reporting of all financial transactions within the business

	including the preparation of customer bills, payment of bills and payroll, maintenance of general ledger, and preparation of financial statements. Additionally, the department is responsible for tax and business compliance as well as analyzing financial data and preparing departmental and company budgets and forecasts.
Marketing	Responsible for ongoing communication, strategic vision and execution of all marketing programs, plans and promotions including but not limited to paid advertising, email, conference exhibit, eCommerce site, social media, and content development. Also responsible for internal support of the WPS Sales and Training Departments and for any WPS customer facing channel used for promotion or advertising of products.
Project Management	Responsible for project planning and execution of all projects across the company through cross-collaboration and communication.
Art & Production	Executes design and copyediting work on WPS assessment products, marketing and sales collateral, and training presentations. Maintains, upholds, and evolves WPS brand style. Interfaces with WPS Procurement department and external vendors to ensure timely delivery and high quality standards across printed products.
Facilities	Responsible for the maintenance and upkeep of the WPS facility in Torrance.
Fulfillment	Responsible for the receipt, storing, inventory control/management, assembly, picking, and shipping of WPS goods and services.
Professional Development & Training	Responsible for delivering high-quality professional training experiences to our customers, including continuing education for independent study products, webinars, and in-person courses. Includes responsibility for all related order processing and activating and delivering courses through the WPS Learning Management System (WPS LMS).
People	The People Department is responsible for the various traditionally Human Resource responsibilities of compliance, employee life cycle processing, engagement, benefits administration, and coaching. Our department is also responsible for payroll processing and the positive reinforcement of culture, policy, and practices.
Procurement	Responsible for ongoing procurement, purchasing requests are filled - both goods and services are purchased by purchasers and delivered by

	suppliers. Strategic activities, like demand planning, responsible for finding new suppliers, running various sourcing activities and negotiation terms and conditions. Take part in new savings initiatives, KPIs, on-time, on-quality, and on-cost deliveries. Communication and teamwork, maintaining information about existing suppliers, giving operational visibility, and keeping track of daily tasks and automating routine processes.
Research & Development	Responsible for developing WPS assessments by working with authors to develop and refine item content for ratings scales and performance measures, collecting nationally representative data and clinical samples, analyzing data and developing norms, and producing manuals and content for forms, easels, and record forms. Also, responsible for developing and delivering training and intervention products and providing customer support across all products.
Rights & Permissions	Responsible for asserting intellectual property rights over WPS proprietary content, managing WPS's publishing agreements, approving and issuing licensing and permissions arrangements, processing licensing revenue, collecting royalty recipients' contact and tax ID information for provision to WPS Accounting, assisting authors or their estates in the transfer of rights as appropriate, and approving and issuing WPS Research Discounts. Also assists other departments with consultant agreements and other contracts related to outside contributions to WPS-owned content.
Sales	Responsible for supporting our customers in their assessment needs and purchases. We focus on providing solutions; be that training on products through site visits, webinars or convention attendance, providing quotes, assisting with vendor registrations or processing orders.
IT Security & Compliance	Responsible for providing ongoing information security to WPS's assets (people, application, infrastructure and data). Also responsible for supporting and maintaining ongoing regulatory compliance initiatives.
Operations	Responsible for trade compliance, strategic and operational objectives, budgets, quality control, facility upkeep, the safety of staff, and finding ways to increase the quality of customer service.
IT DevOps	Responsible for deployment governance including CICD, SecOps- integration of SAST and DAST Tools and Source Code and Release Management with tagging and Branching and Merging. Ensuring

	highly available solutions including replication, clustering etc. Design, implement and document Disaster Recovery strategies for critical business servers for OES. Communicate and coordinate with other IT teams to successfully resolve support and maintenance issues.
IT Database Engineering	Responsible for implementing database solutions. Develops and enforces database standards and best practices including performance, security, monitoring policies and procedures.

Processes and Procedures

Processes and Procedures	
Procedure/Process	Description
Security Policy	The Company's policies concerning various security, availability, and confidentiality matters are reviewed at least annually by the Security Team.
Risk Assessment	At least annually the COO, Privacy Officer, VP of Engineering, and the Cyber Security Officer collaborate on an overall risk assessment for WPS and the Online Evaluation System.
Communication	WPS opportunistically and continually uses a mixture of intranet services, email, and in-person meeting opportunities for the communication of security policies and procedures. Regular confirmation of this communication is captured in annual attestations from each team member that they have read general internal policies.
Logical Access	All team members must have unique credentials as well as established authorization to access WPS's information assets. Access to systems and information is restricted based on the responsibilities of the individual and their role.
Change Management	WPS has a Secure Development Policy. The policy covers the planning, assignment, development, design, code review, impact considerations, infrastructure assignments, quality assurance, security testing, implementation, and maintenance of both the System software and infrastructure.

System Boundaries

System Boundaries

DC 5: The applicable trust services criteria and the related controls designed to provide reasonable assurance that the service organization's service commitments and system requirements were achieved

Integrity and Ethical Values

WPS is committed to protecting employees, customers, partners, vendors, and the company from illegal or damaging actions by individuals, either knowingly or unknowingly. Our Corporate Ethics Policy establishes behavioral and ethical standards for WPS employees, vendors, and the company and serves to guide business behavior to ensure ethical conduct.

WPS employees will maintain the highest ethical standards in the conduct of company business. The intent is that each associate will conduct WPS's business with integrity and comply with all applicable laws in a manner that excludes considerations of personal advantage or gain.

Commitment to Competence

WPS's management defines competence as the knowledge and skills necessary to accomplish tasks that define employees' roles and responsibilities. Management's commitment to competence includes management's careful consideration and review of detailed job descriptions for roles. These job descriptions outline accountabilities, skills necessary to do the work, and behavioral competencies. These job descriptions are updated each time a role needs to be filled, a promotion is outlined, or if the role's requirements are changed. Employees are asked to review these new job descriptions upon entry into their new role.

Training is provided to current staff on an as-needed basis to maintain the skill level of personnel. This training is one on one and based on the individuals' needs at the time.

Management's Philosophy and Operating Style

WPS is a stable, successful company engaged in work that makes a difference in people's lives. We have the stability of a third-generation family business combined with the entrepreneurial drive of a startup. WPS is a place where people come to build careers. Many of our 120+ employees have been with us for

10, 20, or even 30 years or more.

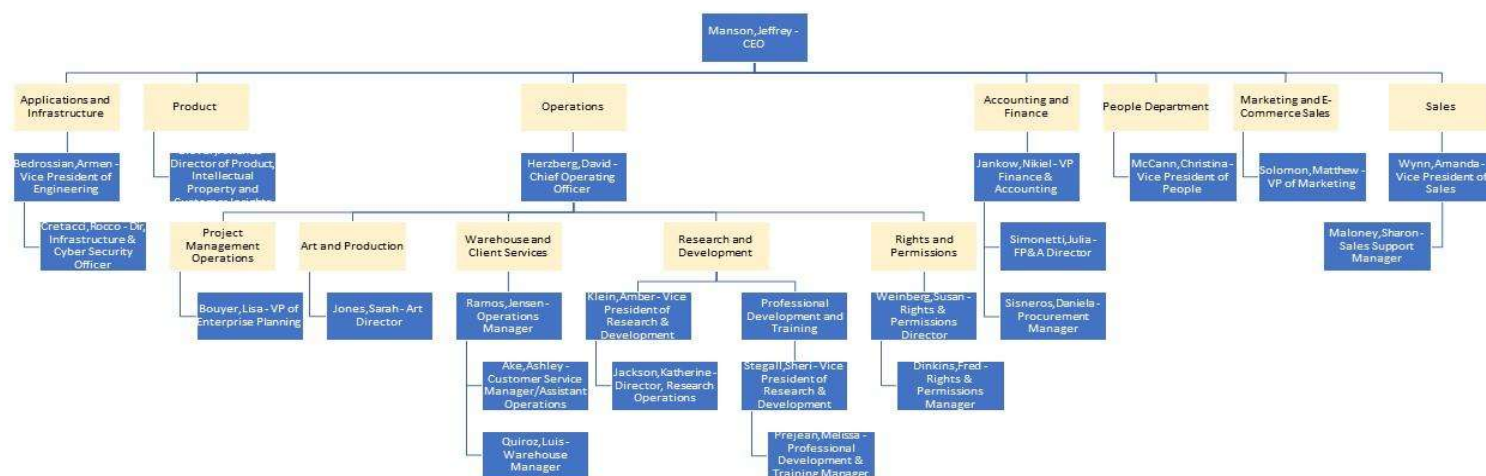

WPS's management team is committed to creating a productive and encouraging work environment as well as providing a secure product to our customers and users. To accomplish this WPS has instituted a number of processes:

1. Quarterly "all hands" meetings for employees to voice their blocks, successes, and concerns.
2. A rigorous QA program ensuring that software development meets industry security standards.
3. Meetings are held between managers on a monthly basis to prioritize objectives and tasks.
4. Employees are encouraged to engage in a process of collaborative problem-solving in dealing with any challenging or unexpected situations.

Organizational Structure and Assignment of Authority and Responsibility

WPS has a simple organizational structure. Employees report directly to the Department Heads, Managers or Supervisors, who ultimately provide direction. WPS has clearly defined job descriptions and as the organization grows, we have in place, roles and responsibilities which will allow for the dissemination of managerial responsibilities as necessary. WPS has taken the following steps to achieve this goal:

1. Regularly updated organization chart fully accessible by employees.
2. Responsibilities of roles are clearly defined in policies and job descriptions.

Human Resource Policies and Practices

Our People Department Mission Statement:

In support of our company's principles, values, vision, and mission, it is the charge of the People Department to help WPS thrive by helping our People Thrive.

It is our mission to:

- Build trust: our organization succeeds and grows on a foundation of trust.
- Create an atmosphere that fosters belonging, creativity, collaboration, and career growth.
- Commit to doing and to acting openly, equitably, and consistently.
- Promote ethical and legal conduct in personal and business practices.
- Communicate in a candid and fair manner.
- Foster diversity and inclusion in our workforce.

Some of the transactional practices that support this mission include the ongoing process improvement and documentation of processes to deliver a transparent and expected outcome for each step. Hiring and retaining competent and qualified talent is key and is accomplished through the rigorous hiring practices of the organization. This includes not only a technical skill review, a cross-functional interview, and a culture fit interview so the right people are determining the most qualified candidate for the role.

Our culture is one that involves collaboration and individualized care based on the specific situation

surrounding an issue. Each issue is resolved with the mission, labor law, and values of the organization in mind.

As a matter of standard practice, WPS routinely conducts the following for all staff:

- Annual performance reviews
- Regular feedback and team collaboration on projects
- Monthly employee cyber security training and annual safety training
- New employees are required to sign a confidentiality agreement upon hire
- WPS recognizes that policies and procedures often need to change to serve the needs of the organization. To accomplish this, all security procedures are regularly reviewed and updated based on need.

Security Management

The WPS Information Security team is comprised of an internal Director of Infrastructure, Cyber Security Officer, DevOps and Systems Engineers. They are responsible for enforcing the information security policies, configuring, monitoring and maintaining preventative, corrective, and detective controls within the WPS environment, and ensuring user awareness training is conducted. WPS also employs a 3rd party Managed Detection Response team that provides 24/7 security monitoring, threat hunting, threat containment and security advisory services.

Security Policies

WPS has adopted the following Security Policies:

Acceptable Use
Access Control
Asset Management
Backup and Restoration
Business Associate Agreement
Business Continuity and Disaster Recovery
Change Management
Clean Desk and Clear Screen
Confidential Communication
Corporate Ethics
Customer Support and SLA
Data Integrity
Data Retention and Disposal
Guidelines on Uses and Disclosure of Protected Health Information (PHI)
HIPAA Breach Notification Policy
HIPAA Internal Privacy Policy
Incident Management
Information Classification
Information Security
Key Management and Cryptography

Network Security
Patch Management Policy
Personnel Security
PHI De-identification Policy and Procedure
PHI Retention and Disposal
Physical and Environmental Security
Privacy Policy for Websites
Progressive Disciplinary Policy
Risk Assessment
Server Security
Social Media Policy
Software Development
Standards of Conduct
System Maintenance Policy
Technology Equipment Handling and Disposal
Vendor Management
Vulnerability and Penetration Testing Management
Workstation and Mobile Device

Personnel Security Procedures

WPS has several personnel security procedures in place specifically during the onboarding process. These include:

1. Background checks for new employees.
2. Employees must read and agree to all security policies.
3. Roles within the organization have been clearly defined and are reflected in the organizational chart.
4. Employees are granted access/authorization based on their role and in accordance with the principle of least privilege.
5. Upon hire and monthly thereafter, security awareness training is completed by all WPS employees.
6. Employees are directed to report any potential security incidents to the Cyber Security Officer.
7. Violations of WPS security policies have clearly defined repercussions.

Change Management

WPS's change management procedures are detailed in the Change Management Policy. There are six key requirements for all changes to the organization, business processes, information processing facilities, and systems that affect information security in WPS's production environment. They are as follows:

1. All change requests must be entered into the ticketing system of record and all approvals, scheduling, comments, and implementation details will be recorded as part of the entered ticket.
2. Changes to the information system shall be authorized, documented, and controlled using a formal change control procedure.

3. All changes are tested and reviewed before deployment to production.
4. Development/test environments are separate from production environments with access control in place to enforce separation.
5. Production data shall not be used for testing or development.
6. A rollback process must be used for unsuccessful deployments.

Incident Management

WPS's incident response procedures are detailed in its Incident Response Plan. Our primary goals will be to investigate, contain any exploitations, eradicate any threats, recover WPS systems, and remediate any vulnerabilities. Throughout this process, thorough documentation will be required as well as a post-mortem report.

Specific steps that WPS will take are:

1. The Security Officer will manage the incident response effort.
2. A recurring Incident Response Meeting will be held at regular intervals until the incident is resolved.
3. WPS will inform all necessary parties of the incident without undue delay.
4. Should the breach involve the release or loss of control of PHI, WPS will refer to its HIPAA Addendum to the Incident Response Plan. The addendum lays out specific definitions as well as a comprehensive plan for remediation.

System Account Management

WPS's access management procedures are documented in its Access Control Policy. WPS uses Role-based authorization to control access to its network infrastructure. WPS uses the principle of least privilege to determine the type and level of access to grant users. A number of standards are in place that WPS uses when granting access to its systems:

1. Valid access authorization from the immediate supervisor or system owner,
2. The principle of least privilege, which allows only authorized access to users, including privilege users based on their job functions and intended system usage,
4. Considering the separation of duties between individuals, to prevent malicious activity without collusion, and,
5. Other attributes as required by the Western Psychological Services or business function.
6. Restrict user accounts from installing software on devices.
7. Administrator, system and generic accounts shall be strictly controlled and given access based on authorization from designated personnel. Western Psychological Services shall authorize and monitor the use of guest/anonymous and temporary accounts.
8. Temporary and inactive accounts that are no longer required and accounts of terminated or transferred users shall be deactivated promptly. Account access privileges shall be reviewed periodically.
9. Access Approval: Western Psychological Services shall follow a documented formal access approval process for granting or changing access privileges.

Risk Management Program

Risk Management Responsibilities

Risk Management Responsibilities	
Role	Responsibility
CEO	Ultimately responsible party for the acceptance and/or treatment of any risks to the organization.
VP of Engineering, COO, Privacy Officer	Can approve the avoidance, remediation, transference, or acceptance of any risk cited in the Risk Register. These roles shall be responsible for communicating risks to top management and the board and adopting risk treatments in accordance with executive direction.
Director of Infrastructure, Cyber Security Officer	Shall be responsible for adherence to the Risk Management Policy.

Risk Assessment

WPS's Risk Assessment process takes into account a number of factors each of which contributes to both the likelihood and potential impact of a given risk. These include:

1. The criticality of potentially impacted business processes.
2. Whether a risk could potentially impact the confidentiality, availability, integrity, or privacy of customer data, PII, or PHI.
3. Potential monetary loss.
4. The ability of the risk to impact WPS's business objectives.
5. Potential impact to WPS's customers or vendors

WPS uses Risk Treatment Plans for any response to risks other than "Accept."

Integration with Risk Assessment

WPS is committed to handling and remediating risks inherent in any commitments, agreements, or responsibilities it may enter into or take on during the operation of the company. Due to the nature of these risks, it may be necessary for WPS to develop specialized controls. WPS takes into account all relevant factors; contractual, legal, and regulatory when designing these controls. In general, WPS's Risk Assessment procedure is still applicable to risks inherent in WPS's commitments and contractual responsibilities and should be applied to determining the severity of risks.

Information and Communications Systems

WPS uses Slack and MS Teams for restricted internal communications. WPS also uses video conferencing tools and Office 365 email for both internal and external communications.

For workflow, project management, and sharing of internal documents WPS uses Jira and Confluence as well as OneDrive.

Access to Production Code Base

WPS uses a fully encrypted VPN solution as well as HTTPS and TLS 1.2 to communicate with and access its network. Furthermore, MFA is required to access any production code base and SSO is used wherever possible.

Access Control to the production code base is limited via the following controls:

1. VPN credentials must be used to access any part of WPS's codebase
2. The production code branch is protected, requiring a merge request and approval before any changes can be made. This also protects the branch from being deleted.
3. RBAC approach is used for accessing the application code repository.

DC 7: Complementary Subservice Organization Controls (CSOCs)

Although the subservice organization has been “carved out” for the purposes of this report, certain Trust Services Criteria are intended to be met by controls at the subservice organization.

Complementary Subservice Organization Controls (CSOCs)	
Criteria	Complementary Subservice Organization Controls
CC6.4	AWS is responsible for restricting data center access to authorized personnel.
CC6.4	AWS is responsible for the 24/7 monitoring of data centers by closed circuit cameras and security personnel.
CC7.2, A1.2	AWS is responsible for the installation of fire suppression and detection, and environmental monitoring systems at the data centers.
CC7.2, A1.2	AWS is responsible for protecting data centers against disruption in power supply to the processing environment by an uninterruptible power supply.
CC7.2, A1.2	AWS is responsible for overseeing the regular maintenance of environmental protections at data centers.

DC 8: Trust Services Criterion not Relevant to the System and Reasons

None.

DC 9: Disclosure of Significant changes in last 1 year

None.

Trust Service Categories in Scope
